Ref. CP13-113-000

Dear Ms. Bose,

RECEIVED
2014 JUN 12 PM 12:59
BOARD OF PUBLIC WORKS

I support the Dominion Cove Point LNG export facility because it will boost our employment rates and economy throughout the county. The environment will not be adversely affected by the renovation of the terminal, as proven by FERC through their extensive Environmental Assessment.

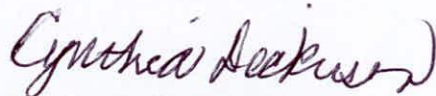

The terminal has the community's quality of life at the forefront of their efforts. They have proposed several solutions to concerns addressed by the community having to do with traffic and air and noise pollution—they will provide strategic traffic management, hidden sound barriers and the installation of state-of-the-art environmental controls in preparation for the project's construction.

The Dominion Cove Point export facility will generate \$40 million in additional annual property taxes, an additional \$23 million in local income taxes, \$2.3 billion in sales revenue for local businesses, thousands of new construction jobs, and 175 full-time employees onsite. We cannot let this opportunity pass us by. Let's put Maryland on the map as home to one of the first liquefied natural gas export facilities in Calvert County.

Time is of the essence—please come to your final decision to approve the Dominion Cove Point terminal before we miss out on this opportunity to improve Calvert County.

Please be advised, this letter has also been sent to Governor Martin O'Malley and the Maryland Board of Public Works.

Thanks for your time,

Cynthia Dickerson
